

Protect pollinators and allow bird migration.

Other species are adversely affected by artificial light at night.
We are all part of the same ecosystem.

Follow the five principles of good lighting listed on the other side
of this card.

Use dark sky approved lighting and encourage your neighbors
and municipalities to do the same. Communicate your desire to
preserve dark skies to your representatives and retail stores.

Five Lighting Principles for Responsible Outdoor Lighting

Responsible outdoor lighting is

1 Useful

Use light only if it is needed

All light should have a clear purpose. Consider how the use of light will impact the area, including wildlife and their habitats.

2 Targeted

Direct light so it falls only where it is needed

Use shielding and careful aiming to target the direction of the light beam so that it points downward and does not spill beyond where it is needed.

3 Low Level

Light should be no brighter than necessary

Use the lowest light level required. Be mindful of surface conditions, as some surfaces may reflect more light into the night sky than intended.

4 Controlled

Use light only when it is needed

Use controls such as timers or motion detectors to ensure that light is available when it is needed, dimmed when possible, and turned off when not needed.

5 Warm-colored

Use warmer color lights where possible

Limit the amount of shorter wavelength (blue-violet) light to the least amount needed.
